About Gonkar

Experience

Hiring Gonkar services means hiring a team with outstanding skills. You will work with professionals offering real high-end security solutions for small, medium-sized, and large enterprises.

Our team holds the most prominent certifications in the cybersecurity field and has divulged many CVEs as a clear sign of quality, providing incredible value to our clients, making their software safer and more reliable for the industry.

We also love to code and constantly develop private and open-source tools that support our work and protect our clients' infrastructure.

Operations

We operate where our customers need our expertise. We hold constant operations in Europe, Israel, North America, and South America. This diversity helps us to comply with multiple industry-standard from different locations and increase our availability and time to respond.

Our Services

Penetration Testing

We specialize in pentest for IT infrastructure, Web Apps, Mobile Apps, and Banking services.

The approach of our security specialists is to study the infrastructure and systems to test along with the threats for its industry and apply the most effective method for the security assessment. Depending on our customer's compliance requirements, we can assist you in achieving goals for certifications like ISO, PCI-DSS, DORA, and more.

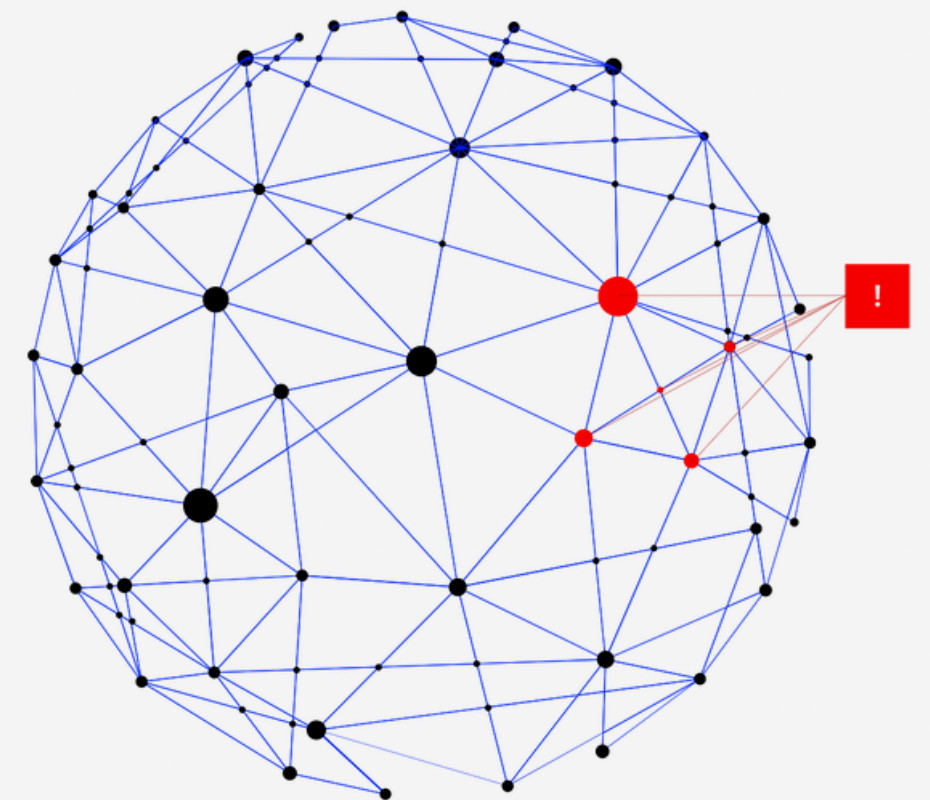

Cyber Intelligence

Gonkar's Cyber Intelligence is designed to provide strategic and situational awareness for better understanding, identification, and anticipation of potential threats to protect our customers by covering data leak detection, domain monitoring, exposure tracking, and attack surface.

Infrastructure

Design, build or correct the infrastructure of your business to make it completely secure.

We help you to design the infrastructure of your company, with our experience in cyber security, your business will develop secure from the beginning.

Cybersecurity Project Management

Cyprom is a cybersecurity project management platform that has been created to close a gap in management by centralizing every aspect in just one tool to rule them all. As a result, it will increase your team's efficiency by cutting micromanagement, boosting critical tasks, and endowing deep visibility, tracking, and high-level metrics.

It will allow you to manage pentests, intrusion tests, and red team exercises in the most effective way to assemble client-provider as one team.

The most tedious tasks in Cybersecurity PM are tracking endless email threads, exchanging sensitive information, spending time in meetings to coordinate simple tasks, and controlling every step in multiple documents and platforms can be an operative disaster for a modern company.

Benefits

Centralization

Teamwork

Achivements

Save Time

High-level Metrics

Economic Value

Oversight

Team Wellness

Centralization

Forget about Jira, Confluence, Excel, Plain Text, Outlook, Teams, Slack, Trello, Zoom, Skype, Power BI, external password managers, third-party storage, and micromanagement to coordinate a project.

Cyprom centralizes every step, and more importantly, it allows you to automatize tasks.

Cyprom

High-level Metrics

- Keep your KPI under control thanks to an intuitive dashboard that presents essential information to provide high visibility of every aspect.
- Know more about the performance of your teams.
- Locate bottlenecks in the workflow, and find solutions.
- Have control over your budget, knowing how much you invest in cybersecurity overall and by provider

Cyprom

Teamwork

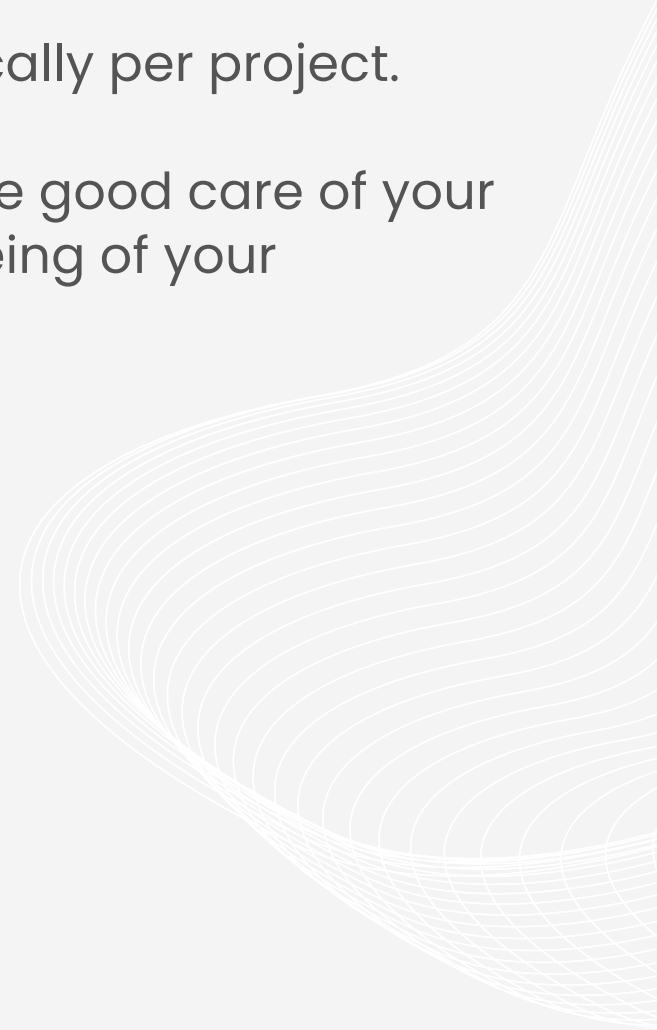

Cyprom simplifies client-supplier interaction by providing a workflow that improves the coordination and visibility of actions for both sides.

Cyprom

Achievements

- Be compliant in time.
- Reduce the time consumption drastically per project.
- Your company grows as a result of the good care of your department's budget and the well-being of your technical team.

Cyprom

Oversight

Understand the status of every project by having a quick look at the planning, thanks to an intuitive interface that allows controlling multiple projects at once.

Cyprom

Save Time

Cyprom allows the automation of processes that release small teams from time-consuming tasks, such as collecting information, organizing requests on-demand, performing escalations, simplifying the exchange of documents, sending automatic emails, etc.

Overdue

In Time

Cyprom

Team Wellness

- Reduce stress and burnout feeling in the team
- Automate tasks of the workflow and put more FTE on critical tasks
- Increase the quality of communication
- Team efficiency

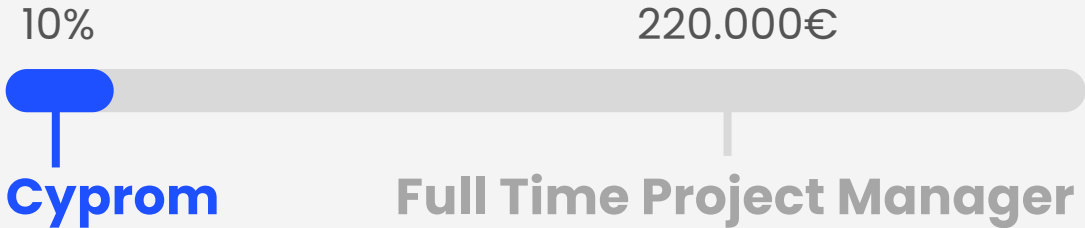

Cyprom

Economic Value

The average cost of a Project Manager full-time in Europe is 220.000€.

Cyprom boosts your current team for less than 10% of the average price of a PM.

Cyprom

01

Centralization

Forget about Jira, Confluence, Excel, Plain Text, Outlook, Teams, Slack, Trello, Zoom, Skype, Power BI, external password managers, third-party storage, and micromanagement to coordinate a project. Cyprom centralizes every step, and more importantly, it allows you to automatize tasks.

02

Save Time

Cyprom allows the automation of processes that release small teams from time-consuming tasks, such as collecting information, organizing requests on-demand, performing escalations, simplifying the exchange of documents, sending automatic emails, etc.

03

Oversight

Understand the status of every project by having a quick look at the planning, thanks to an intuitive interface that allows controlling multiple projects at once

04

Team Wellness

Automate an entire workflow and put more FTE on critical tasks
Reduce stress and burnout feeling in the team
Increase the quality of communication

05

High-level Metrics

- Keep your KPI under control thanks to an intuitive dashboard that presents essential information to provide high visibility of every aspect.
- Know more about the performance of your teams.
- Locate bottlenecks in the workflow, and find solutions.
- Have control over your budget, knowing how much you invest in cybersecurity overall and by provider

06

Synchronization

Cyprom simplifies client-supplier interaction by providing a workflow that improves the coordination and visibility of actions for both sides.

07

Economic Value

The average cost of a Project Manager full-time in Europe is 220.000€. Cyprom powers your current team for less than 10% of the average price of a PM.

08

Achievements

Be compliant in time
Reduce the time consumption drastically per project
Your company grows as a result of the good care of your department's budget and the well-being of your technical team.

What makes Cyprom different?

Workflow Templates

Create workflow templates to follow every step of the projects using multiple modules to centralise and automatize tasks.

- 1 File Exchange:** send an email to all the stakeholders with an attached file, and a temporal URL to upload the file.
- 2 Check Point:** a simple mark to give visibility to simple tasks.
- 3 URL:** can be used to keep track of third-party URLs like scope, references, related tickets, etc. In future versions, it will automatically detect URLs from Jira or ServiceNow to provide a quick status.
- 4 Report:** allow your service providers to fill out a form to briefly review the findings and upload the reports.
- 5 Credentials:** securely stores credentials. It allows sending an email to interested parties along with a temporary URL where they can register the credentials, thus eliminating intermediaries. Every time any collaborator or pentester activates the credential visibility, they must enter their credential, and this activity will be registered. Credentials are stored securely.
- 6 File Charger:** use this module in your workflow to allow the upload of documentation related to the project and make it visible and accessible for everyone.
- 7 File Sharing:** send and receive files. If you want to send a document as a static step of your workflow, this module will allow you to send an email with the file attached. If you wish to receive one, it will generate a temporal URL to send to the stakeholders to be used to upload the file.

Other Features

Perimeters

To build a significant segmentation of tasks, you are able to create multiple perimeters to assign collaborators, roles, documentation, and more.

Roles Management

choose between multiple roles to grant appropriate permission, visibility, and access.

Notifications

Update stakeholders as project status changes.

Communication

Thanks to an in-app chat, you will not have to jump into Outlook, Slack, Teams or Skype to have a word.

On-premise or Cloud

Choose where to host your Cyprom. You can have it on your infrastructure or use Gonkar's cloud. Depending on your decision, this impacts the final budget.

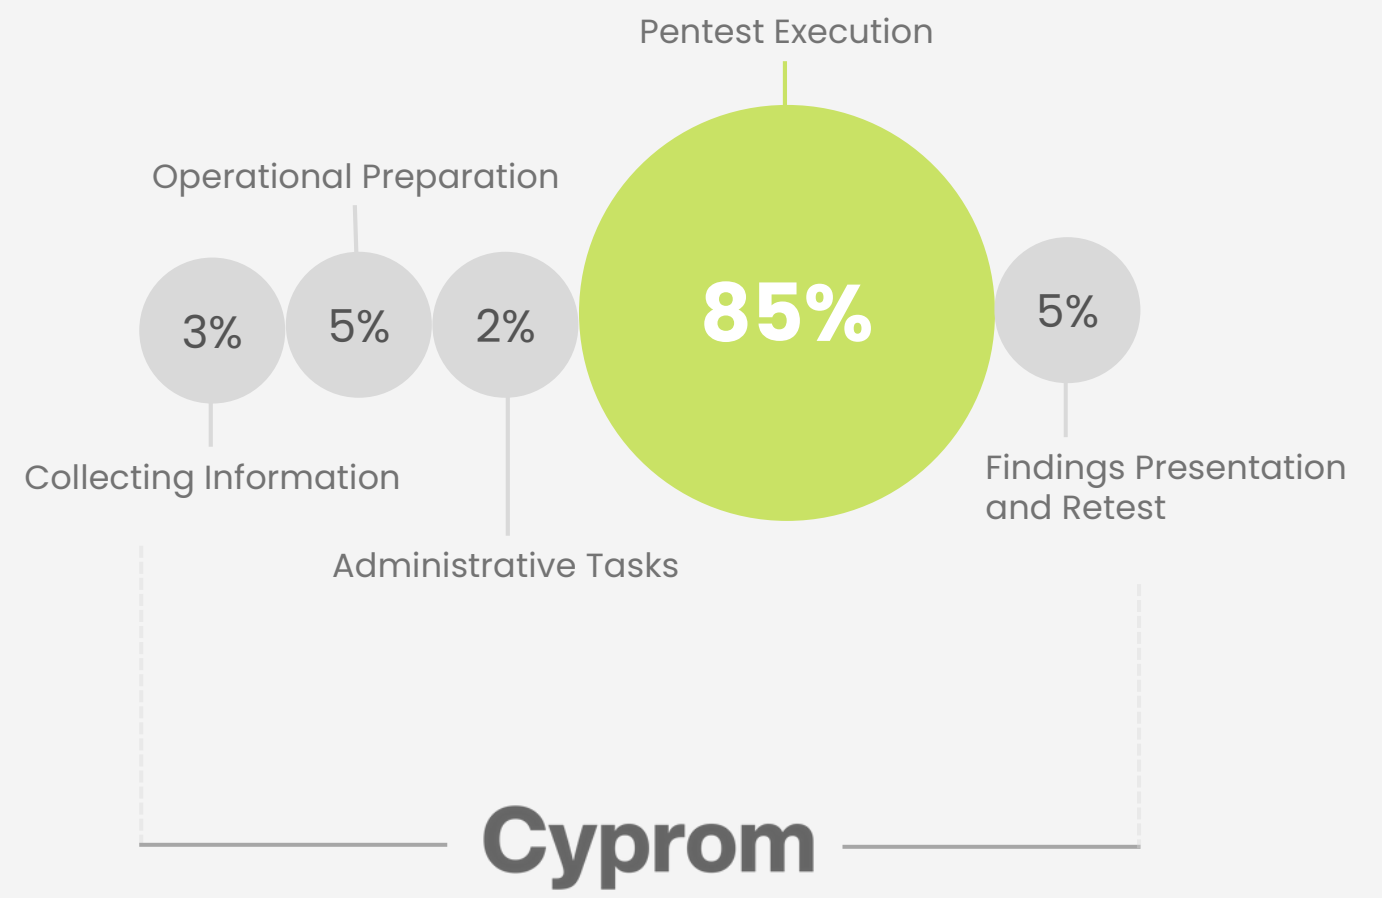

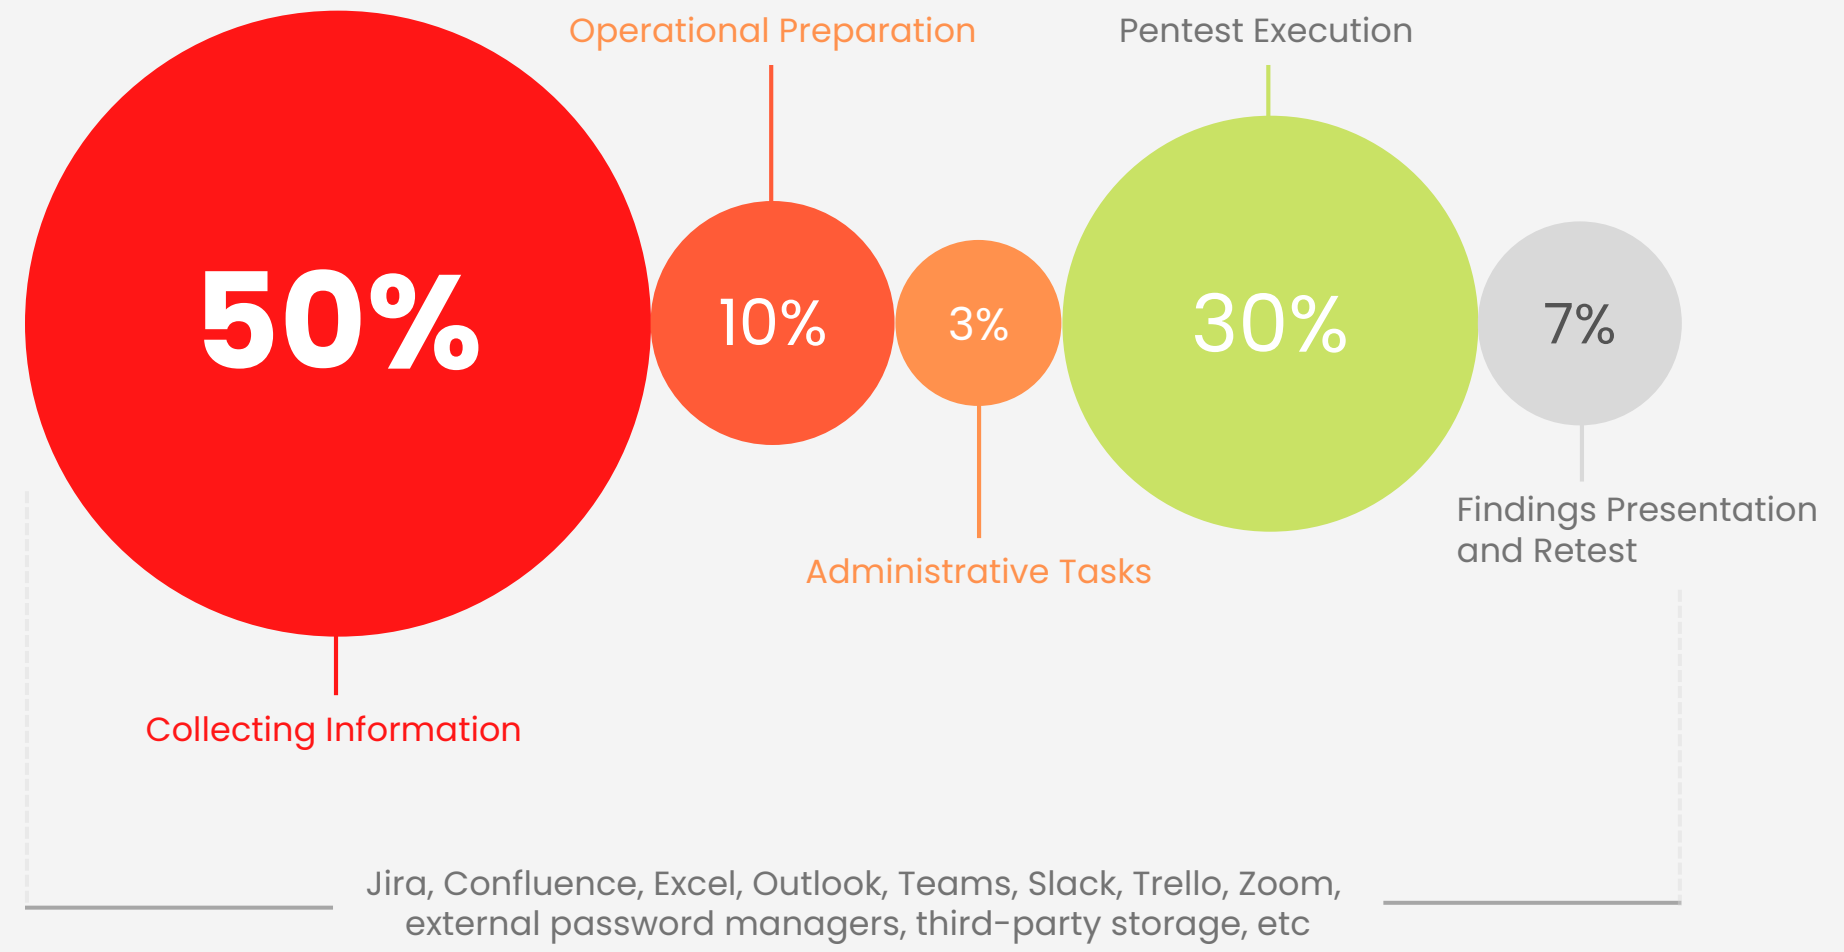

Blackout

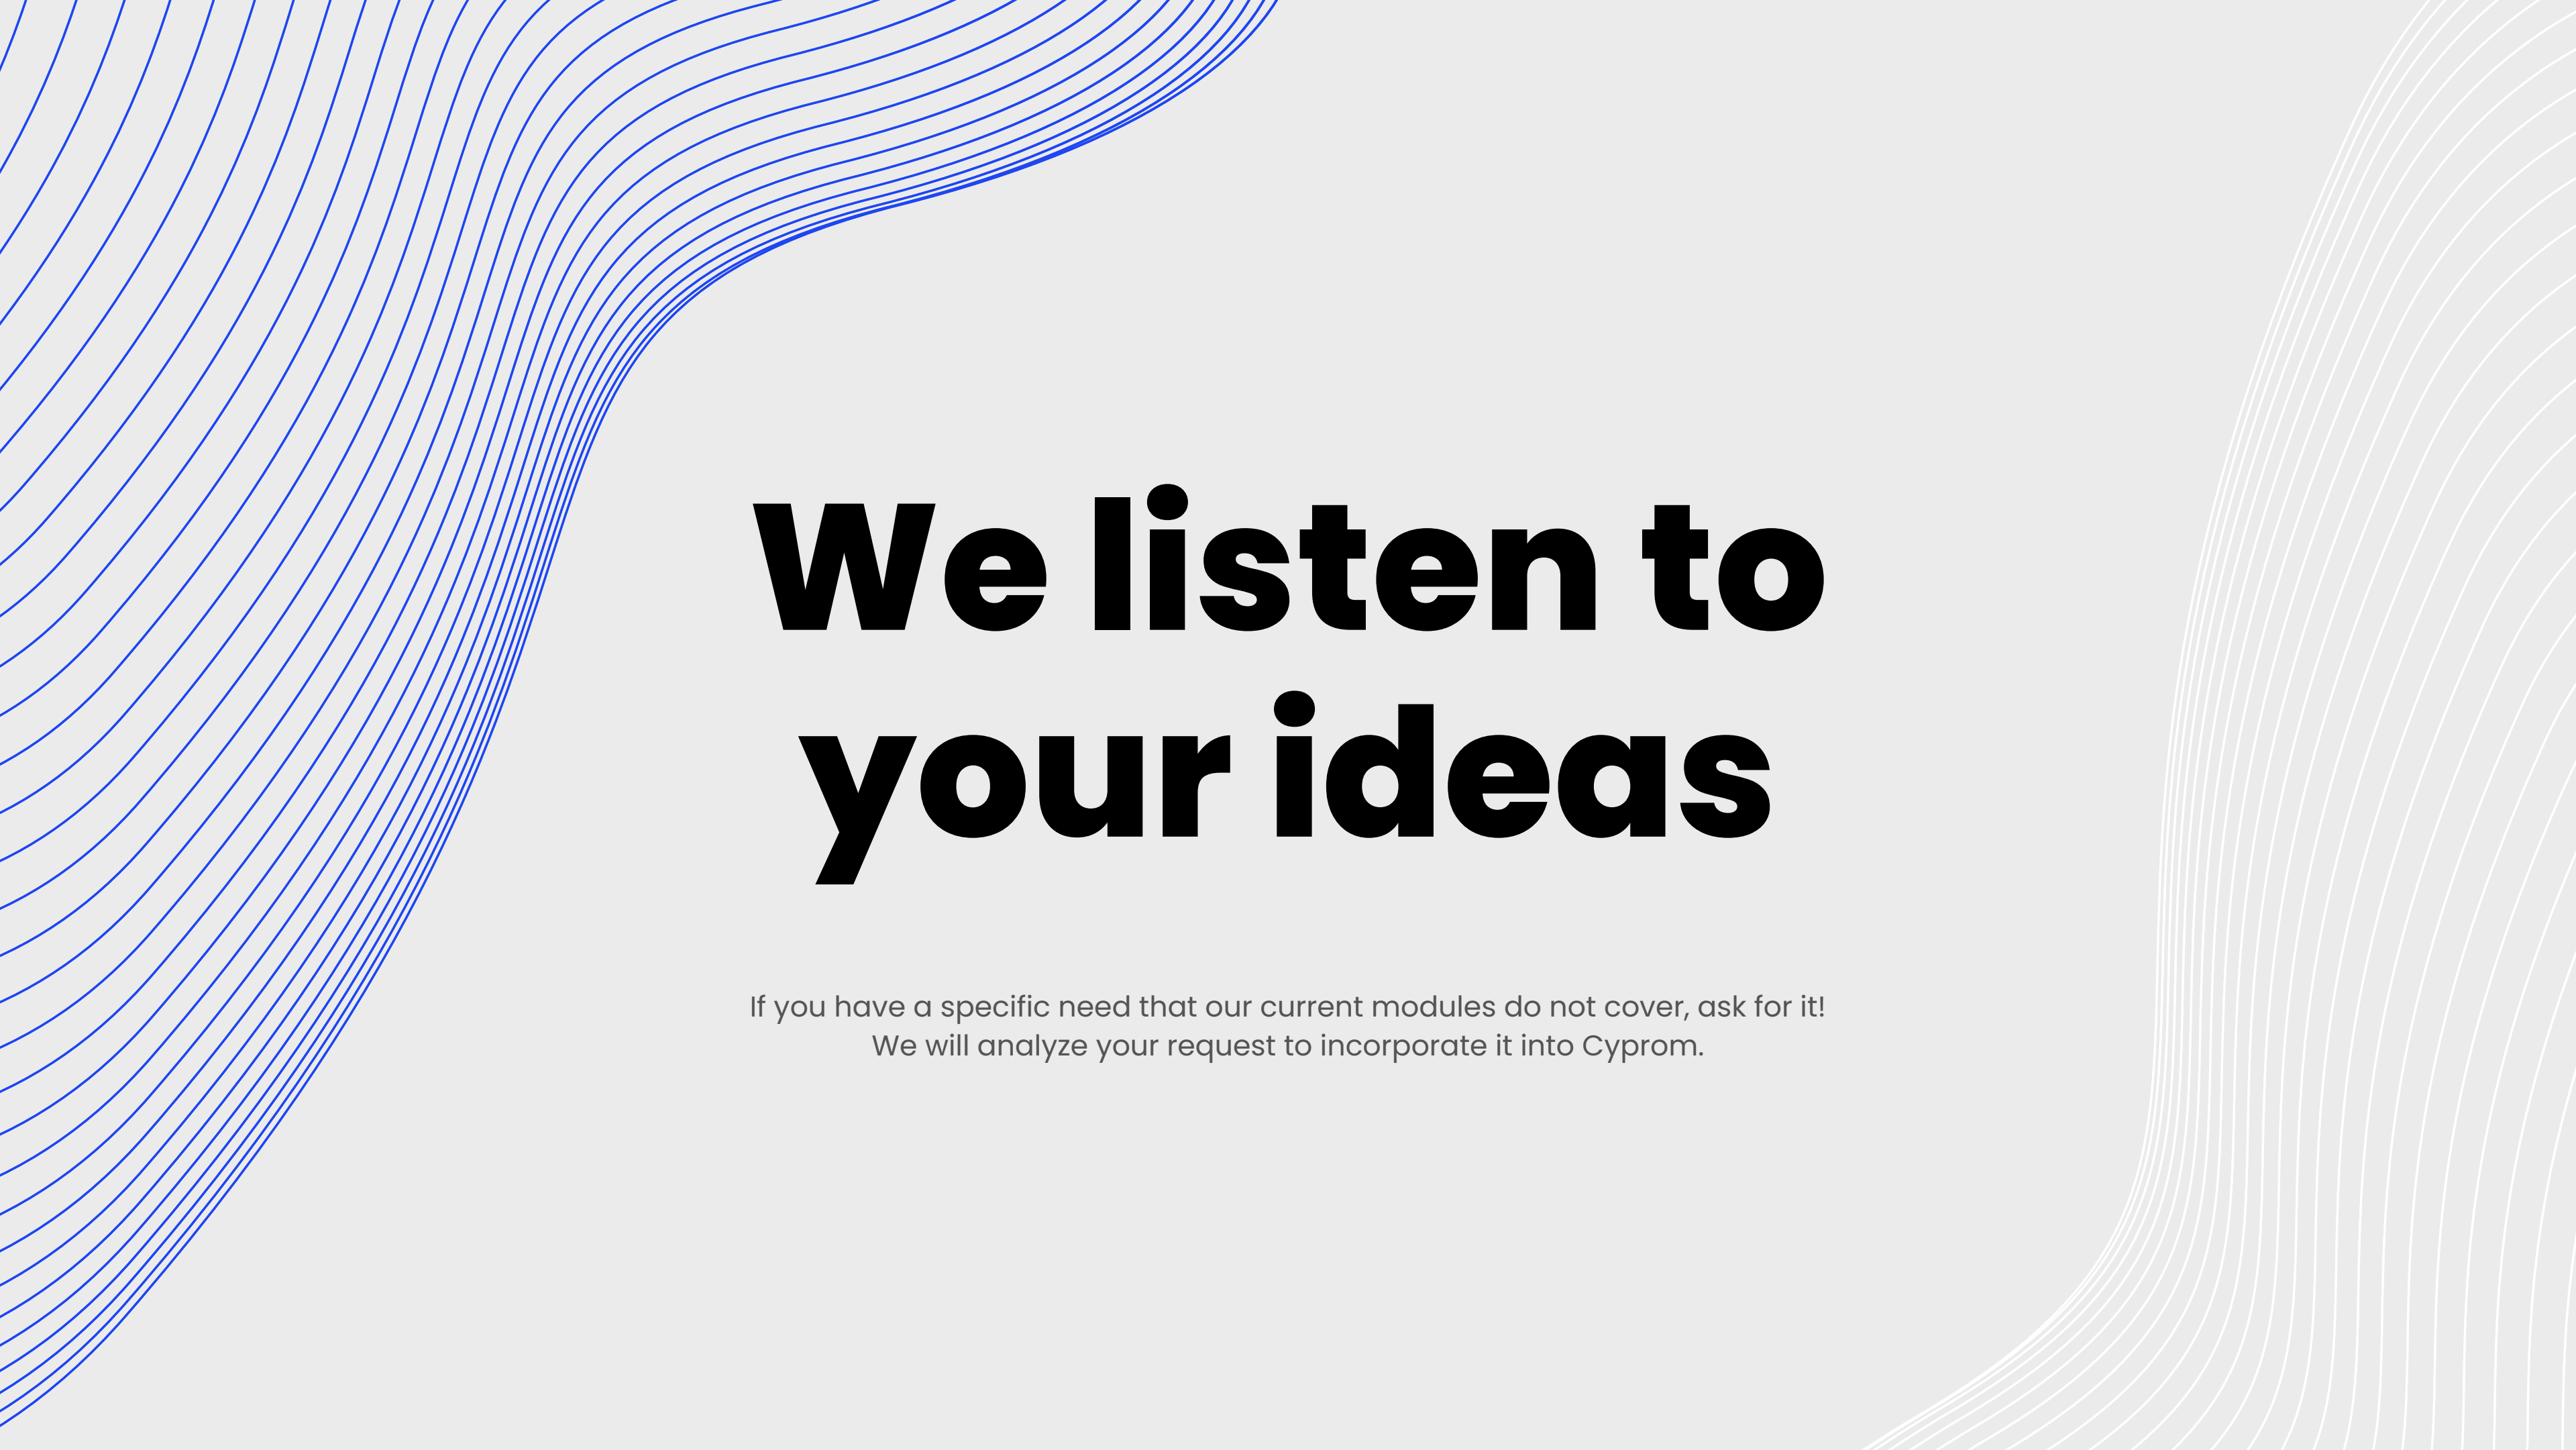

Depending on your business model, there should be periods of time when no tests should be run. Blackout allows you to set these periods per perimeter so that collaborators will not be able to configure the tests on those timeframes.

Tasks

Assign duties to collaborators and pentesters according to roles and perimeters with complete oversight from the beginning.

The following graph illustrates at a high level the impact of having Cyprom integrated into your team.

We listen to your ideas

If you have a specific need that our current modules do not cover, ask for it!
We will analyze your request to incorporate it into Cyprom.

Thank you!
